

# Blackrock

## Location

Near Reno, Nevada

## Nevada Type Location

- Walker Lane Trend
- Within the Como Mining District

## Geological Setting

A dominant quartz vein system emplaced in a north-northeast striking, southeast dipping fault zone hosted by silicified andesite

## Target Deposit Type

Epithermal Gold Silver Vein Deposit

**Property** → 12 claims; 1800m x 600m  
→ Administered by the Bureau of Land Management

**Geological Target** → Mineralized Quartz Vein System

**Proximal Mines and Deposits** → Comstock district – 20 km NW produced >8M ounces of gold

**Analog Deposit** → Con Virginia deposit produced 1.1M tonnes of ore with an average grade of 87 gpt Au

## Historical Mining:

A small caved adit in the arroyo at the southern end of the vein outcrop is the only known historic mine working on the property.

## Historical Exploration Work:

Company	Year	Com.	Type of Work	Comments
Unknown	1800's	Au	Adits	Two adits along the structure (106m)
		Au	Trenches	Several trenches were completed
Bentnick and Lester	1979	Au	Adits	Resampling the adits, old dumps,
Placid Oil Company	1985	Au	Rock Samples	39 rock samples collected
			Soil Samples	30 soil samples collected
			Stream Sediment	2 stream sediment samples
			VLF-EM Survey	Discontinued due to weak signals
Echo Bay Exploration	1986	Au	Rock sampling	No results
Aqua Gold Resources	1988	Au	Trenching	Two trenches dug with a bulldozer
Almac Mineral Resources	1989	Au	Further Sampling	No available results
Integrated Resources	1990	Au	Geological Mapping	Grid work
			Rock Sampling	
			Soil Sampling	
			VLF-EM Survey	
			Total Field Magnetics	
			Trenching	
Baughman	1999	Au	Staked	Staked by Jerry as the ground was open
Romarco Minerals	1999	Au	Surface Sampling	61 rock samples
Meridian Gold Company	1999	Au	Surface Sampling	13 rock samples; all samples > 100 ppb Au
Teck Resources	2000	Au	Geological Mapping	260 rock samples collected
			Rock and Soil Sampling	
			Petrological Study	
Franco Nevada	2001	Au	Surface Samples	17 samples
Pacific Rim Exploration	2001	Au	Surface Samples	11 rock samples
Western Exploration	2001	Au	Drilling	4 RC dh
Miranda Gold Corp.	2001?	Au	Surface Samples	3 samples
New Dimension Res.	2008	Au	Drilling	12 holes

## BPV Results:

**Surface Samples** → 1.62 gpt Au in hand sample  
→ 1.11 gpt in hand sample

## BPV Exploration Strategy:

Geological mapping and surface rock chip sampling has defined the vein trace on surface and existing drillhole data constrains the vein orientation to shallow depths. Since, historical exploration in the Blackrock property was limited to only the top few hundred feet, exploration can be advanced quickly to the drill stage .

## Proposed Exploration:

- 2D and 3D Compilation
- Confirmatory Geological Mapping
- Rock Chip Geochemistry
- RC Drilling (4,000m)

## Budget:

- 2011: US\$1,500,000
- 2012: US\$200,000 (success driven)
- Total: US\$1,700,000

**Timeline:** Phase 1 – Jan '11 to May '12  
Phase 2 – July '11 to Jan '12
